Business Continuity made EASY
Protect your business with the best of both worlds

Your business can not afford downtime. That is why we know your expectation is to be able to recover anything, anytime, anywhere. You need a solution that guarantees recovery times with zero failure and you do not want to hear about upgrading your backup systems, buying more disk space and getting training for some new solution.

Hybrid-cloud backup & recovery can provide better coverage to recover your critical systems and data, replacing your legacy systems with little impact to internal resources or the bottom line.

Enterprise Data Protection
Radically Simplified

To prepare for the “when and not if” you need a solution in place that is ready to recover every part of your business, even in the face of the worst disasters. Whether workstations or servers, Windows, Linux or Mac, files or databases, physical or virtual, a single item or an entire OS, we can recover your business – even to an alternate location.

Data is securely stored using 448-bit Blowfish encryption in one of 2 data centers in North America, so you can rest assured that no one besides your company can obtain or see your data. A synchronized local backup is also maintained ensuring you can recover even in the event your Internet connection goes down. And by backing up to the cloud, you have a copy of every part of your business ready and available to be recovered without expensive hardware, complex systems and one more thing to support. Instead, your critical data is quickly backed up using state-of-the-art compression technology, allowing your Internet connection to quickly backup and recover your critical data and systems.
We are here to help your business stay operational

We want to not just provide you the tools to ensure your business gets backup and running, but also manage the entire process.

**GETTING YOU BACKED UP**
The on-boarding experience is completely managed by qualified USDV engineers. Depending on the environment, a USDV engineer will either connect remotely or perform a local seed backup. USDV will supply you with documentation of all data and systems being backed up.

**PRO ACTIVE MONITORING**
Do you know when most people are find problems with their backups? Right! - When they need to restore, when it is too late. Pro-active monitoring is the missing key in securing your ability to recover anything.

**RESTORE & DISASTER RECOVERY SUPPORT**
When something does go wrong, call us and we will make sure you can go back right to before things went wrong. So you can relax and not worry about anything.

**TWO LOCATIONS FOR BETTER PROTECTION**
Even a backup plan, should have a backup plan. Our backups have one copy onsite and one copy offsite. That way, you know you can recover, even without an Internet connection!

**OUR GUARANTEE**

Simply put, we provide assurance. That USDV hybrid cloud backup & recovery, gives you peace of mind when it comes to your ability to get your business backup and running:

- **FASTEST RECOVERY POSSIBLE**
The fastest restore source (cloud or local) is automatically chosen to ensure your data is recovered as quickly as possible.

- **ANYTIME, ANYWHERE RECOVERY**
With optional synchronization to local storage, you can rest assured that a backup is available at any location, with or without the Internet.

- **PRIVACY, SECURITY AND COMPLIANCE**
Backups and recovery are transmitted over a secure channel and encrypted with a private key encryption so only you can see your data.

- **CAPACITY-BASED PRICING**
Backups become very scalable because you pay a set rate based on what you use. Capital expenses are a thing of the past, making the life of your Finance department worry-free.

- **ALWAYS AVAILABLE SUPPORT**
We are there 24/7 to ensure the highest availability possible.

**WE ARE HERE TO HELP YOU EVERY STEP OF THE WAY**
Give us a call and let us tailor a business continuity program to best ensure your business can always go back right before things went wrong.
